summary

A motivated and detail-driven QA Tester passionate about delivering high-quality software through structured testing practices and analytical thinking. Experienced in working within Agile/Scrum teams, with a strong eye for identifying issues early and ensuring seamless user experiences. Combines hands-on experience in SQL, API Testing, Java, and Python with effective communication and collaboration to bridge the gap between business needs and technical execution.

Education

Bachelor of computer and information it Dept. menoufia university , Egypt ,2018

Intern experience

Manual Software Tester

Al-janahain co

Feb 2025 Remotely

- Analyzed business requirements, functional specifications, and user stories to identify gaps, ambiguities, and testability issues prior to test execution
- Raised clarifications with business analysts, product owners, and developers to ensure full understanding of acceptance criteria before testing began
- Designed end-to-end test scenarios covering positive paths, negative paths, boundary conditions, and edge cases based on business flows and user journeys
- Wrote detailed, structured test cases including preconditions, step-by-step instructions, expected results, and post conditions
- Maintained traceability between test cases and their corresponding requirements or user stories across multiple releases
- Tracked daily testing progress in Jira by creating and updating tasks, logging comments, and linking tickets to parent stories and epics
- Reported detailed bug reports in Jira including summary, steps to reproduce, actual vs. expected results, severity, priority, environment details, screenshots, and logs
- Linked defects to relevant user stories and assigned them to the appropriate developers for resolution
- Retested fixed defects and updated ticket statuses accordingly (Reopened / Verified / Closed)

Key Projects

Financial Egyptian and global Stock markets (Nemrml)

Training and Courses

Digital Egypt Pioneers Initiative – DEPI

Dec.2025 to present

Software Testing

Ministry of Communications and Information Technology

- ISTQB Foundation level.
- Manual testing .
- Java.
- Soft skills.
- API testing.
- Data base Testing.
- Automation testing.
